

Denti-Code KT

Domain Models — UML & Relations

Generated on 2026-06-03. Package roots: **com.denticode.kt.data** (domain/persistence) and **com.denticode.kt.ui.*** (presentation).

Entity relationships

From	To	Card.	FK column	Meaning
Patient	Appointment	1 → *	patient_id	A patient has many appointments.
Doctor	Appointment	1 → *	primary_doctor_id	Primary doctor per visit.
ProcedureType	Appointment	1 → *	procedure_type_id	Optional treatment catalog link.
Appointment	Appointment	0..1 → 0..1	follow_up_appointment_id	Self-reference for follow-up visits.
Appointment	AppointmentNote	1 → *	appointment_id	Structured notes on a visit.
Appointment	AppointmentAuditEntry	1 → *	appointment_id	Audit trail per action.
Patient	PerformedAction	1 → *	patient_id	Treatment performed for patient.
Appointment	PerformedAction	1 → 0..1	appointment_id	Treatment linked to visit.
Doctor	PerformedAction	1 → *	performing_doctor_id	Doctor who performed treatment.
ProcedureType	PerformedAction	1 → *	procedure_type_id	Procedure catalog reference.
Patient	Payment	1 → *	patient_id	Payments belong to patient.
Appointment	Payment	1 → *	appointment_id	Optional payment linked to visit.
PerformedAction	Payment	1 → *	performed_action_id	Payment can reference treatment.
Consultory	MaterialInventoryLine	1 → *	consultory_id	Stock per consultory.
TreatmentFacility	MaterialInventoryLine	1 → *	facility_id	Stock per facility type.

Domain enumerations

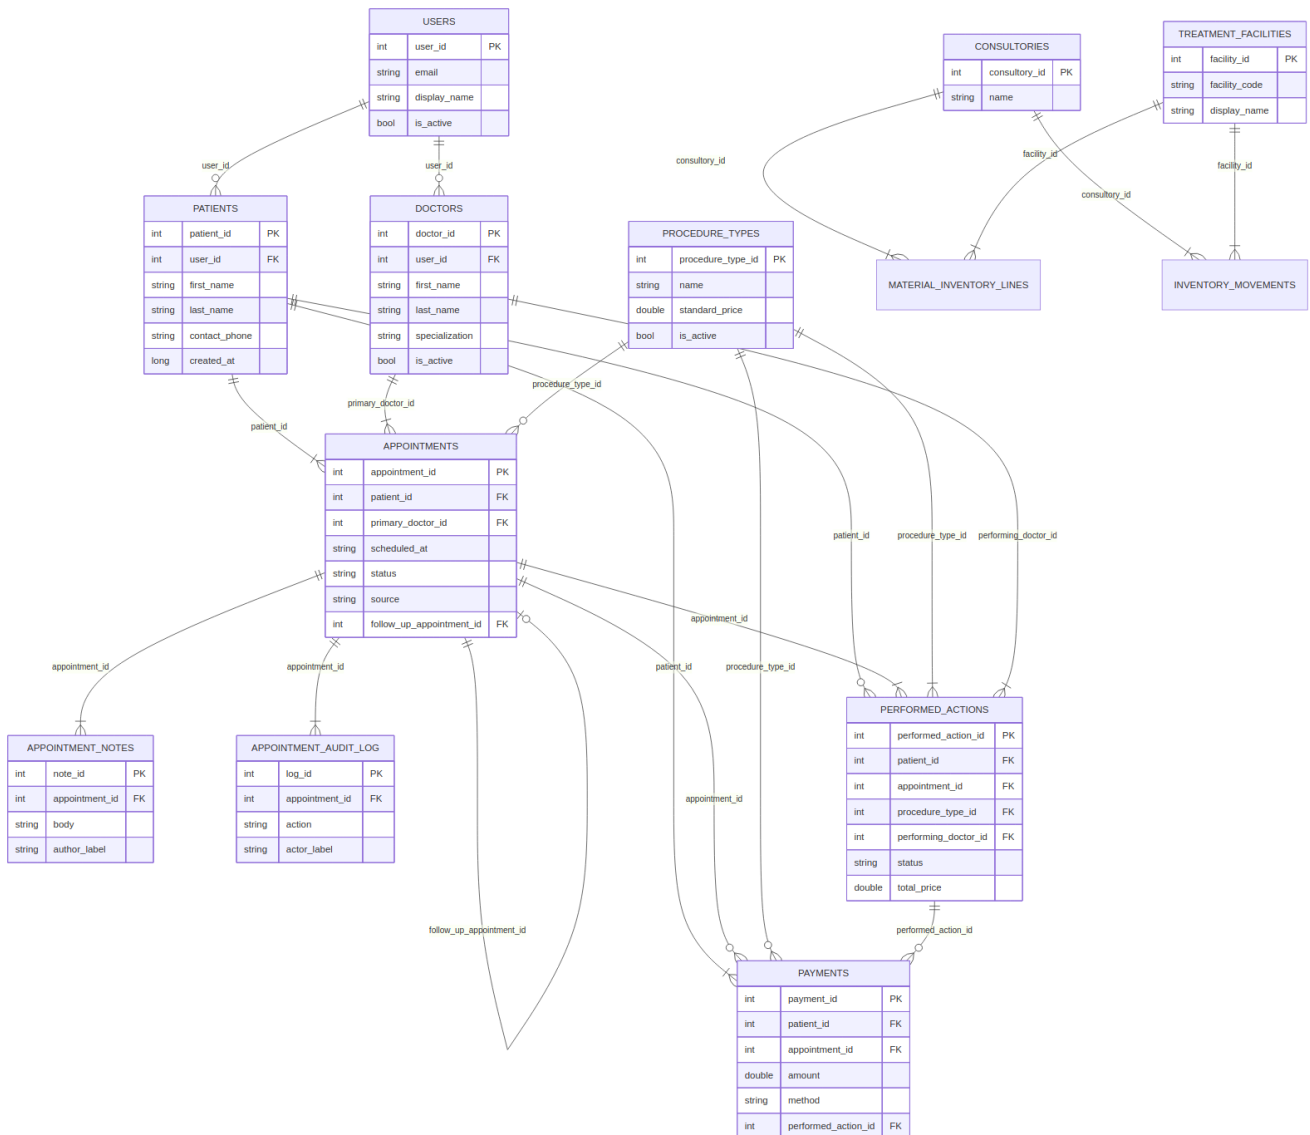

Enum	Values
AppointmentStatus	SCHEDULED, CONFIRMED, IN_PROGRESS, COMPLETED, CANCELLED, NO_SHOW, RESCHEDULED
AppointmentSource	MANUAL, ONLINE
AppointmentPaymentStatus	PAID, PENDING, PARTIAL, NONE
TreatmentStatus	PLANNED, IN_PROGRESS, COMPLETED, CANCELLED
PaymentMethod	CASH, CARD, TRANSFER, INSURANCE, OTHER
PaymentDisplayStatus	PAID, PENDING, FAILED (UI-derived)
DoctorListStatus	ACTIVE, INACTIVE, VACATION
PatientListStatus	ACTIVE, INACTIVE, PENDING

Kotlin table → model mapping

SQL / Exposed table	Kotlin data class
UsersTable	User (DB only)
DoctorsTable	Doctor
PatientsTable	Patient
ProcedureTypesTable	ProcedureTypeRow
AppointmentsTable	AppointmentRow
AppointmentNotesTable	AppointmentNoteRow
AppointmentAuditLogTable	AppointmentAuditEntry
PerformedActionsTable	PatientTreatmentRow
PaymentsTable	PaymentRow / PatientLedgerPayment
ConsultoriesTable	Consultory
TreatmentFacilitiesTable	TreatmentFacility

1. Core persistence model (ER)

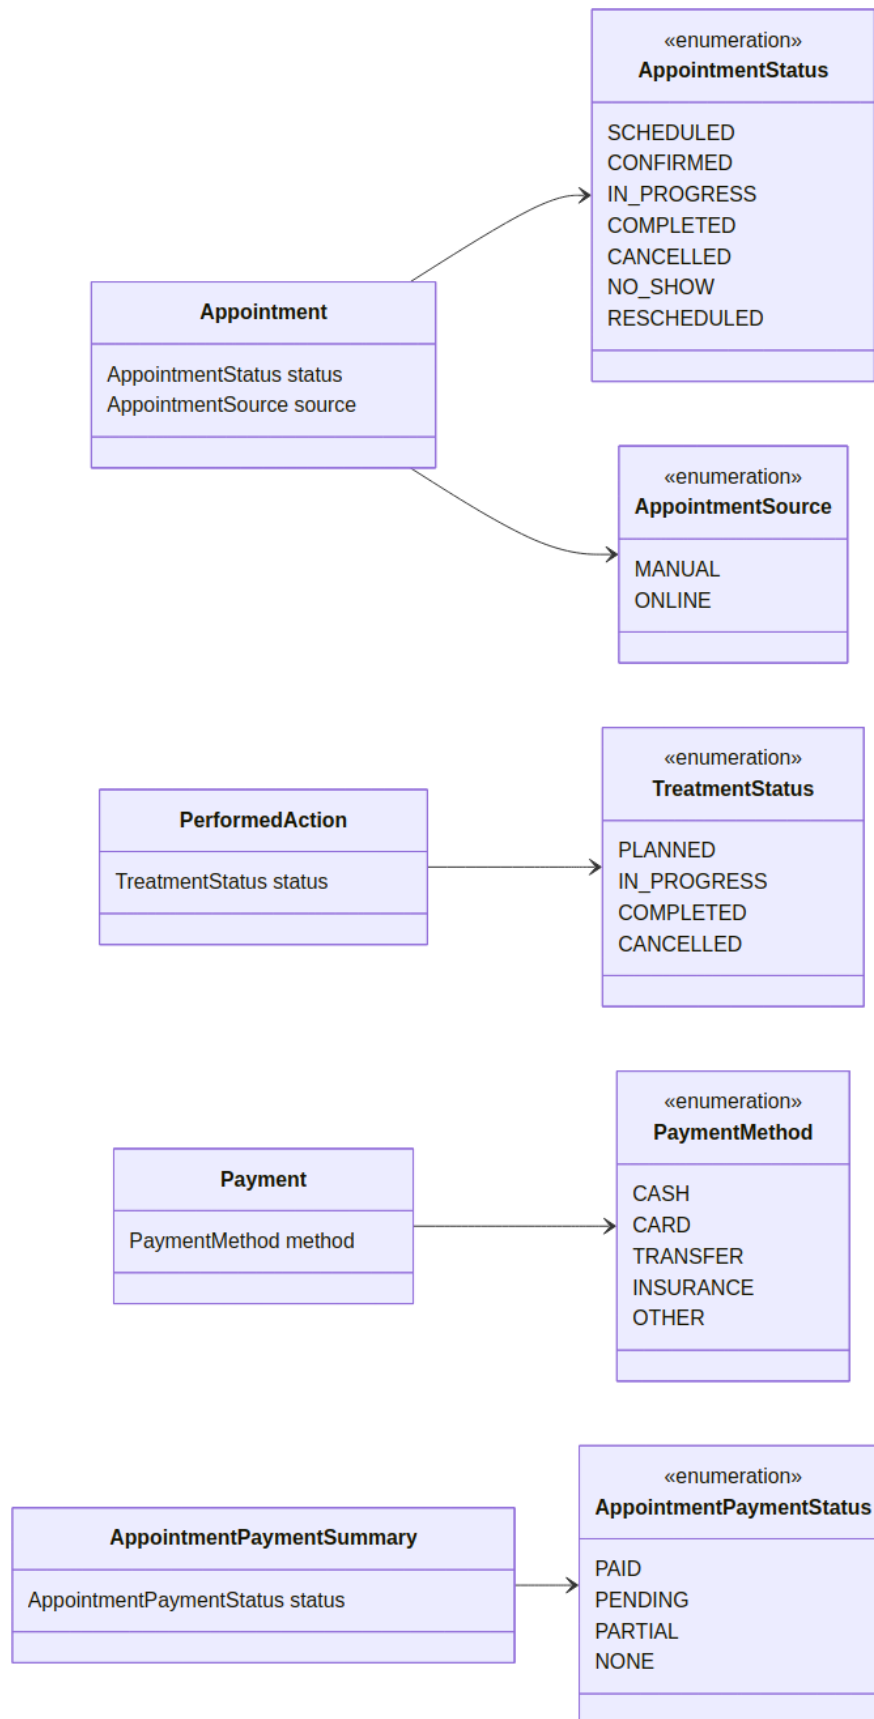

SQLite schema aligned with denti-code-desktop. Primary keys and foreign keys define clinic entities: users, doctors, patients, appointments, treatments, payments, and inventory.

Source: docs/uml/01-core-er.png

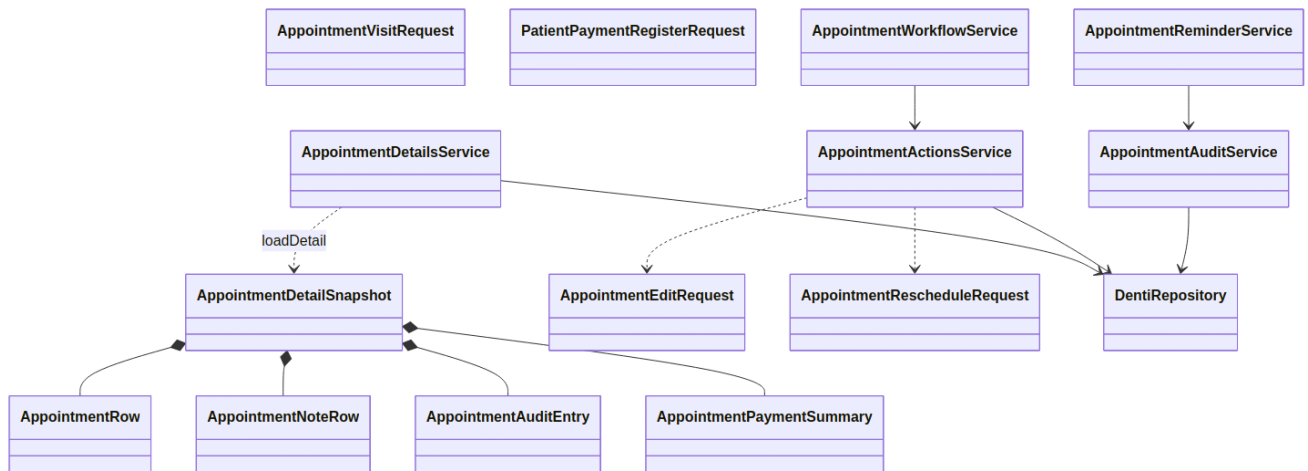

2. Domain enumerations

Shared status and classification enums used across appointments, treatments, and payments.

3. Aggregates and appointment services

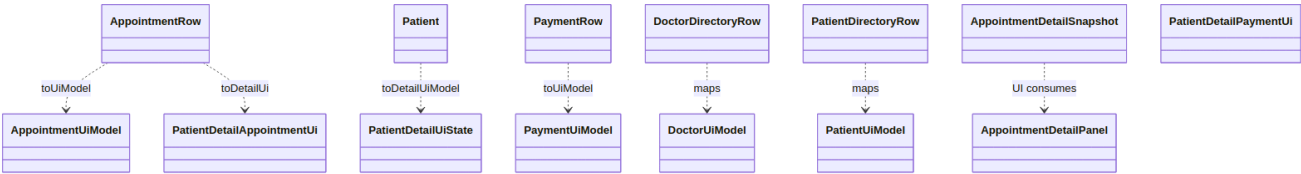

Read models (AppointmentDetailSnapshot) and service layer over DentiRepository.

Source: docs/uml/03-aggregates-services.png

4. UI view models

Presentation-layer projections from domain rows to Compose screen models.
